

# PENGARUH KONSELING TENTANG KB MKJP (METODE KONTRASEPSI JANGKA PANJANG) PADA WUS (WANITA USIA SUBUR) TERHADAP PERSEPSI MKJP DI PUSKESMAS SEDAYU 2

## ABSTRAK

Rinny Rachmawati<sup>1</sup>, Susiana Sariyati<sup>2</sup>, Eka Nurhayati<sup>3</sup>

**Latar Belakang** : Dalam hasil program KKBPK Bantul didapatkan bahwa untuk penggunaan Metode Kontrasepsi Jangka Panjang masih rendah dari 297 yang tercapai hanya 93 peseta. Sedangkan data yang di peroleh di Puskesmas Sedayu II hanya sebanyak 4,68% (26) peserta KB Baru yang menggunakan MKJP. Oleh karena itu pemberian konseling KB MKJP pada WUS terhadap persepsi penggunaan KB MKJP sangat diperlukan guna meningkatkan cakupan KB MKJP di Puskesmas Sedayu II.

**Tujuan** : Untuk mengetahui pengaruh konseling KB MKJP pada WUS terhadap persepsi penggunaan KB MKJP di puskesmas sedayu 2.

**Metode** : Penelitian ini menggunakan metode penelitian one Group Post Test . sampel dalam penelitian ini adalah 48 responden yang menggunakan KB NON MKJP di Puskesmas Sedayu II. Teknik pengambilan sampel menggunakan Quota Sampling. Analisa data yang digunakan adalah Bivariate Instrument yang digunakan adalah kuesioner yang akan di isi oleh responden.

**Hasil** : Persepsi sebelum dilakukan konseling KB MKJP yaitu negatif sebanyak 24 (50%) dan yang berpersepsi positif sebanyak 24 (50%), persepsi setelah dilakukan konseling KB MKJP hasilnya tetap sama sebanyak 24 (50%) positif dan negatif 24(50%). Persepsi wanita usia subur tentang MKJP sebelum dan setelah dilakukan konseling tidak terdapat perbedaan. Hasil uji wilcoxon diperoleh p-value sebesar  $1,000 > \alpha (0,05)$ .

**Kesimpulan** : Tidak ada pengaruh konseling tentang KB MKJP (Metode Kontrasepsi Jangka Panjang) pada WUS (Wanita Usia Subur) terhadap Persepsi MKJP di Puskesmas Sedayu II Bantul.

**Kata Kunci** : Persepsi, Akseptor KB non MKJP, Wanita Usia Subur
