Latar Belakang : Partisipasi lansia di posyandu lansia yang kurang dan tingkat pengetahuan yang rendah tentang posyandu lansia dapat menjadi permasalahan terhadap tingkat kesehatan kelompok lansia untuk mengatasi permasalahan dengan meningkatkan cakupan mutu pelayanan kesehatan posyandu lansia dengan optimal, untuk mencapai derajat kesehatan yang optimal serta kondisi menua sehat dan mandiri.

Tujuan Penelitian : Mengetahui Hubungan Antara Tingkat Pengetahuan Tentang Kegiatan Posyandu Lansia Dengan Partisipasi Lansia Pada Posyandu lansia di wilayah Pringgading, Guwosari, Bantul, Yogyakarta.

Metode Penelitian : Penelitian *induktif* atau analitik. Rancangan penelitiannya *cross sectional*. Sampel dalam penelitian ini adalah lansia yang berusia 60tahun keatas dan yang mengikuti kegiatan posyandu lansia Guwosari, Bantul sebanyak 130 lansia. Analisis data dilakukan dengan analisis *Chi-square*.

Hasil Penelitian : Tingkat pengetahuan lansia tentang kegiatan posyandu lansia dengan kategori cukup sebanyak 50(38,5%). Partisipasi lansia dalam kegiatan posyandu sebagian besar tidak aktif sebanyak 66(50,8%). Hasil analisis *Chi square* diperoleh χ^2_{hitung} sebesar 9,145 sebesar 0,010 ($P<0,05$), Nilai koefisien kontingensi sebesar 0,256 dengan kategori rendah.

Kesimpulan : Terdapat hubungan yang signifikan antara tingkat pengetahuan mengenai kegiatan posyandu lansia dengan partisipasi lansia pada posyandu lansia di wilayah Pringgading Guwosari Bantul, Yogyakarta Tahun 2012.

Kata Kunci : Tingkat Pengetahuan, Partisipasi Lansia dan Posyandu

ABSTRACT

Rizka Dewi K¹, Edi Sampurno, BN., M. Nurs.², Isti Antari, S.Kep.,Ns³

Background: elderly people low participation at elderly people integrated service post and low knowledge level on elderly people integrated service post can be problem on health level of elderly people group to overcome the problem by increasing scope of elderly people integrated service post health service quality to obtain optimum health level and healthy and self sufficient growing old condition.

Research aim: to know relation between knowledge level elderly people on elderly people integrated service post with elderly people participation on elderly people integrated service post at Pringgading area, Guwosari, Pajangan, Bantul Regency, Yogyakarta.

Research method: this is inductive or analytic research. Research design uses cross sectional. Sample in this research are more 60 year old elderly people and following elderly people integrated service post activity at Guwosari Bantul as many as 130 elderly people. Data analysis is conducted using chi-square analysis.

Research result: elderly people knowledge level on elderly people integrated service post activity with enough criterion are 50 (38.5%). Elderly people participation in integrated service post are mostly inactive 66 (50.8%). Chi square analysis shows X_{count}^2 square are 9.145 with 0.010 ($p < 0.05$). contingency coefficient value is 0.256 with low criterion.

Conclusion: there is significant relation between knowledge level on elderly people integrated service post activity with elderly people participation at elderly people integrated service post activity at Pringgading area, Guwosari, Bantul regency Yogyakarta, 2012.

Keywords: knowledge level, elderly people participation and integrated service post.
