Latar Belakang: Dokumentasi keperawatan merupakan unsur penting dalam sistem pelayanan kesehatan. Dokumentasi keperawatan dipengaruhi oleh beberapa faktor seperti latar belakang pendidikan, pelatihan, motivasi, dan lama waktu pendokumentasian. Berdasarkan studi pendahuluan yang dilakukan di ruang rawat inap RSUD Saras Husada Purworejo dengan observasi 30 status pasien didapatkan form pendokumentasian asuhan keperawatan yang terdiri pengkajian, diagnosa keperawatan, perencanaan, implementasi dan evaluasi masih banyak yang kurang lengkap dan kosong.

Tujuan: Mengetahui hubungan antara pendidikan, pelatihan, motivasi, dan waktu dalam pendokumentasian asuhan keperawatan dengan kelengkapan dokumentasi keperawatan di ruang rawat inap RSUD Saras Husada Purworejo.

Metode: Penelitian berjenis inferensial dengan pendekatan waktu *cross sectional*. Populasinya adalah seluruh perawat pelaksana yang bertugas di ruang rawat inap RSUD Saras Husada Purworejo. Teknik sampling yang digunakan adalah *stratified random sampling* dengan jumlah sampel sebanyak 110 orang. Alat pengumpulan data menggunakan kuesioner dan *check list* instrumen studi dokumentasi asuhan keperawatan. Analisis data menggunakan analisis regresi berganda.

Hasil: Variabel pelatihan, motivasi, dan waktu secara parsial memiliki hubungan positif dan signifikan terhadap kelengkapan dokumentasi keperawatan. Variabel pendidikan menunjukkan tidak ada hubungan dengan kelengkapan dokumentasi keperawatan di ruang rawat inap RSUD Saras Husada Purworejo. Kontribusi variabel bebas terhadap variabel terikat sebesar 32,749%.

Kesimpulan: Ada hubungan antara pelatihan, motivasi, dan waktu dalam pendokumentasian asuhan keperawatan dengan kelengkapan dokumentasi keperawatan di ruang rawat inap RSUD Saras Husada Purworejo. Tidak ada hubungan antara pendidikan dengan kelengkapan dokumentasi keperawatan di ruang rawat inap RSUD Saras Husada Purworejo.

ABSTRACT

Background: Nursing documentation was an important element in the health care system. Nursing documentation was influenced by several factors such as education background, training, motivation, and time in nursing care documentation. Based on preliminary study conducted in ward of Saras Husada Purworejo district hospital with observation obtained from 30 medical records showed that the documentation of nursing care comprised assessment, nursing diagnosis, planning, implementation and evaluation remained incomplete.

Objective: To determine the relationship between education, training, motivation, and time in nursing care documentation and completeness of nursing documentation in ward of saras husada purworejo district hospital.

Methods: This study was an inferential research using cross sectional approached. Its population was the entire executing nurses who served in ward of saras husada purworejo district hospital. The sampling method in this study was stratified random sampling with sample number as many as 110 people. The data collection instrument used questionnaires and check list of nursing care documentation. Data analysis was done by doubled regression test.

Result: Variables of training, motivation, and time partially had a positive and significant relationship with the completeness of nursing documentation. Variable of education did not have significant relationship with the completeness of nursing documentation in ward of Saras Husada Purworejo district hospital. Independent variable contribution towards dependent variable was 32,749%.

Conclusion: There was a relationship between training, motivation, and time in the documentation of nursing care with the completeness of nursing documentation in ward of Saras Husada Purworejo district hospital. There was not a relationship between education with the completeness of nursing documentation in ward of Saras Husada Purworejo district hospital.

keyword: education, training, motivation, time, documentation of nursing care.
