ABSTRACT

The purpose of this reseach is to answer a big question about the effectiveness of implementing special cost allocation (DAK) policy in west java province. It correlated with coherence, stability, support, training and involvement in planning, allocation, distribution and controlling the project by 2012-2016 budget year. The issues for these project are corruption by mark-up the budget, late dropping the grant, the transparances process, and discrepancy of regulation. By using qualitative research approach, the researcher found the findings that Bandung Barat has implemented special cost alocation (DAK) in education effective enough by coherence, stability, support, technical training or guiding and involvement by all stakeholder. Otherwise there is barrier but it can be overcame. When we assumed this model as a type of education reform in government service for decentralization. It may be succeed or less succeed because less capacity building and local controll and democratic governed system, (Kohen K and Mehta D., 2017). Finally for implementing the process of all step, then it can adopted new model one of this project.
