HUBUNGAN ANTARA TINGKAT PENGETAHUAN IBU UMUR 30-40 TAHUN TENTANG *VULVA HYGIENE* DENGAN TEKNIK KETEPATAN MELAKUKAN *VULVA HYGIENE* DI DUSUN MLANGI, NOGOTIRTO, GAMPING, SLEMAN TAHUN 2010

Lutfi Handayani¹, Ircham Machfoedz², Darmawanti³

Dari studi pendahuluan terhadap ibu –ibu, menyatakan bahwa ibu – ibu sering mengalami gatal-gatal di sekitar organ perineum, terdapat bercak-bercak di sekitar celana dalam dan sering mencium bau tidak sedap dari organ perineum. Tingkat pengetahuan merupakan salah satu faktor yang mempengaruhi mengenai teknik ketepatan dalam melakukan vulva hygiene. Metode : Jenis penelitian adalah penelitian induktif dengan pendekatan *cross sectional*. Populasi dalam penelitian ini adalah ibu umur 30-40 tahun, di Desa Mlangi, Nogotirto, Gamping, Sleman yang berjumlah 100 orang. Sedangkan pengambilan sampelnya sesuai dengan tabel Krejcie berjumlah 80 orang. Instrumen penelitian menggunakan kuisisioner untuk mengetahui tingkat pengetahuan responden tentang vulva hygiene dan teknik ketepatan melakukan vulva hygiene. Data yang diperoleh digunakan *Product Moment*.

Hasil : Responden yang berumur 39 tahun lebih banyak jumlahnya yaitu 21 orang atau 26,25%. Responden yang berpendidikan SD kelas IV sebanyak 25 orang atau sebesar 31,25%. Didapatkan nilai $r = 0,264$ atau hubungan antara tingkat pengetahuan dengan teknik ketepatan melakukan vulva hygiene rendah atau tidak ada hubungan sama sekali.

Kesimpulan : Hubungan antara tingkat pengetahuan dengan teknik ketepatan melakukan vulva hygiene rendah atau tidak ada hubungan sama sekali.

Kata Kunci : Pengetahuan, Vulva Hygiene, Teknik Ketepatan
