**Latar Belakang :** Kecenderungan peningkatan populasi lansia perlu mendapatkan perhatian khusus, terutama peningkatan kualitas hidup mereka agar dapat mempertahankan kesehatannya (Depkes RI, 2003). Pemerintah telah mencanangkan pelayanan kepada lansia melalui posyandu, meskipun sudah tersedia tetapi lansia yang berkunjung ke Posyandu masih rendah.

**Tujuan Penelitian :** Untuk mengetahui hubungan antara tingkat pengetahuan lansia dengan pemanfaatan posyandu Wreda lansia di Dusun Dirokulon Pendowoharjo Sewon Bantul.

**Metode Penelitian :** Jenis penelitian *survey analitik* dengan pendekatan *cross sectional*. Sampel diambil dengan teknik total sampling hingga di peroleh sampel sebanyak 77 lansia yang berkunjung ke posyandu. Instrumen penelitian adalah kuesioner dan hasil penelitian dianalisis dengan menggunakan uji statistik *Chi square*.

**Hasil Penelitian :** Lansia dengan tingkat pengetahuan baik tentang posyandu sebanyak 14 orang (82,4%) memanfaatkan posyandu dan 3 orang (17,6%) tidak memanfaatkan posyandu. Lansia dengan tingkat pengetahuan cukup mayoritas tidak memanfaatkan posyandu sebanyak 24 orang (64,9%) dan 13 Orang ( 35,1%) memanfaatkan posyandu. Sedangkan lansia yang tingkat pengetahuan kurang mayoritas tidak memanfaatkan posyandu sebanyak 15 orang (65,2%) dan yang memanfaatkan posyandu 8 orang (34,8%). Hasil uji statistik *Chi square* menunjukkan  $0,003 < (0,05)$ .

**Kesimpulan :** Ada hubungan yang signifikan antara tingkat pengetahuan tentang posyandu dengan pemanfaatan posyandu Wreda lansia di Dusun dirokulon pendowoharjo Sewon Bantul.

## ABSTARCT

### RELATIONSHIP OF KNOWLEDGE ABOUT THE POSYANDU WITH UTILIZATION OLD POSYANDU in the hamlet of DIROKULON PENDOWOHARJO SEWON BANTUL<sup>5</sup>

Syiarotul Milla<sup>6</sup>, Tri Prabowo<sup>7</sup>, Retno Wulandari<sup>8</sup>

**Background:** The tendency of increasing elderly population need to get special attention, especially improving the quality of their life to maintain health. The government has launched services to the elderly through the neighborhood health center, although already available but the elderly who visited the integrated health remains low.

**Objective:** To determine the relationship between the level of knowledge of the elderly with the use of neighborhood health center elderly homes in the hamlet Dirokulon Pendowoharjo Sewon Bantul.

**Method:** The study analytical survey with cross sectional approach. Samples were taken with a total sampling techniques to obtain samples in a total of 77 elderly people who visited the neighborhood health center. Research instruments were questionnaire and results were analyzed by using statistical *Chi square* test.

**Results:** Elderly with a good level of knowledge about the neighborhood health center for 14 people (82,4%) use the neighborhood health center and 3 men (17.6%) did not utilize posyandu. Elderly with a majority sufficient level of knowledge did not take advantage of neighborhood health center as much as 24 people (64.9%) and 13 Orang (35.1%) use the neighborhood health center. While ngkat elderly who did not take advantage of knowledge about the majority of neighborhood health center as many as 15 people (65.2%) and the use posyandu 8 persons (34.8%). Chi square statistical test results indicate  $0.003 < (0.05)$ .

**Conclusion:** There was a significant correlation between the level of knowledge about the neighborhood health center with the use of neighborhood health center elderly homes in the hamlet dirokulon Pendowoharjo Sewon Bantul.
